Our Production

About Us

Steelplan Products was established in 1982 and has grown into a trusted sub-contract engineering partner for a large portfolio of clients.

We provide our clients with a broad array of bespoke metal parts to suit their specific needs and are proud to showcase some of them in this brochure.

Flexibility

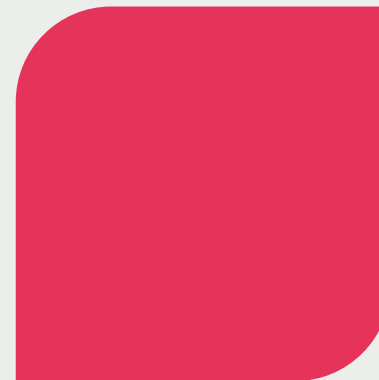

The cornerstone to our relationship with our clients is our ability to be flexible. Whether that is by working together closely on prototypes of new products, rushing an order through if there are tight deadlines or producing a small production run to suit a bespoke order then that's what we do. Our ethos of "Your Products/Our Production" means just that, you are in control and we react to produce exactly what you need with the results being high quality and high client satisfaction each and every time.

Laser & Punching

Lasering and punching of all sheet metals via our automated equipment.

Steelplan Products offers the latest in Trumpf CNC Punching and Lasering equipment that gives us the flexibility to produce pretty much anything in sheet metal, we process a wide range of materials accurately and efficiently to provide our customers with the very best possible service.

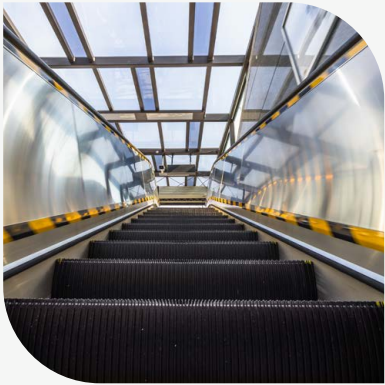

Forming

Multi-axis forming of complex sheet metal parts.

40 year's experience in forming anything from simple brackets to extremely complicated electronic enclosures mean we can offer our customers an unrivalled level of support. As a sub-contract manufacturer operating in diverse markets, we pride ourselves that anything a customer is looking to produce our highly skilled staff will already have experienced something similar.

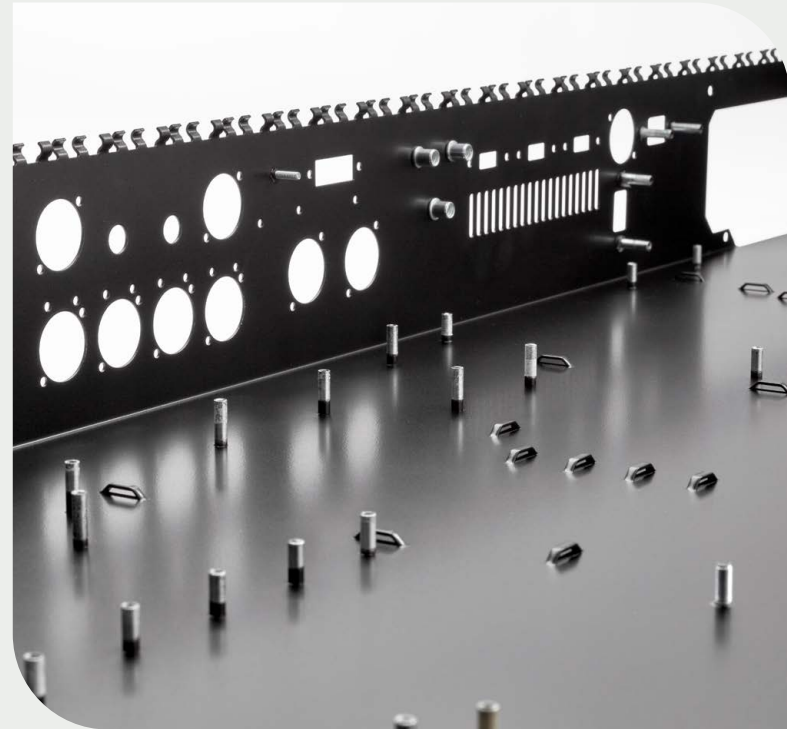

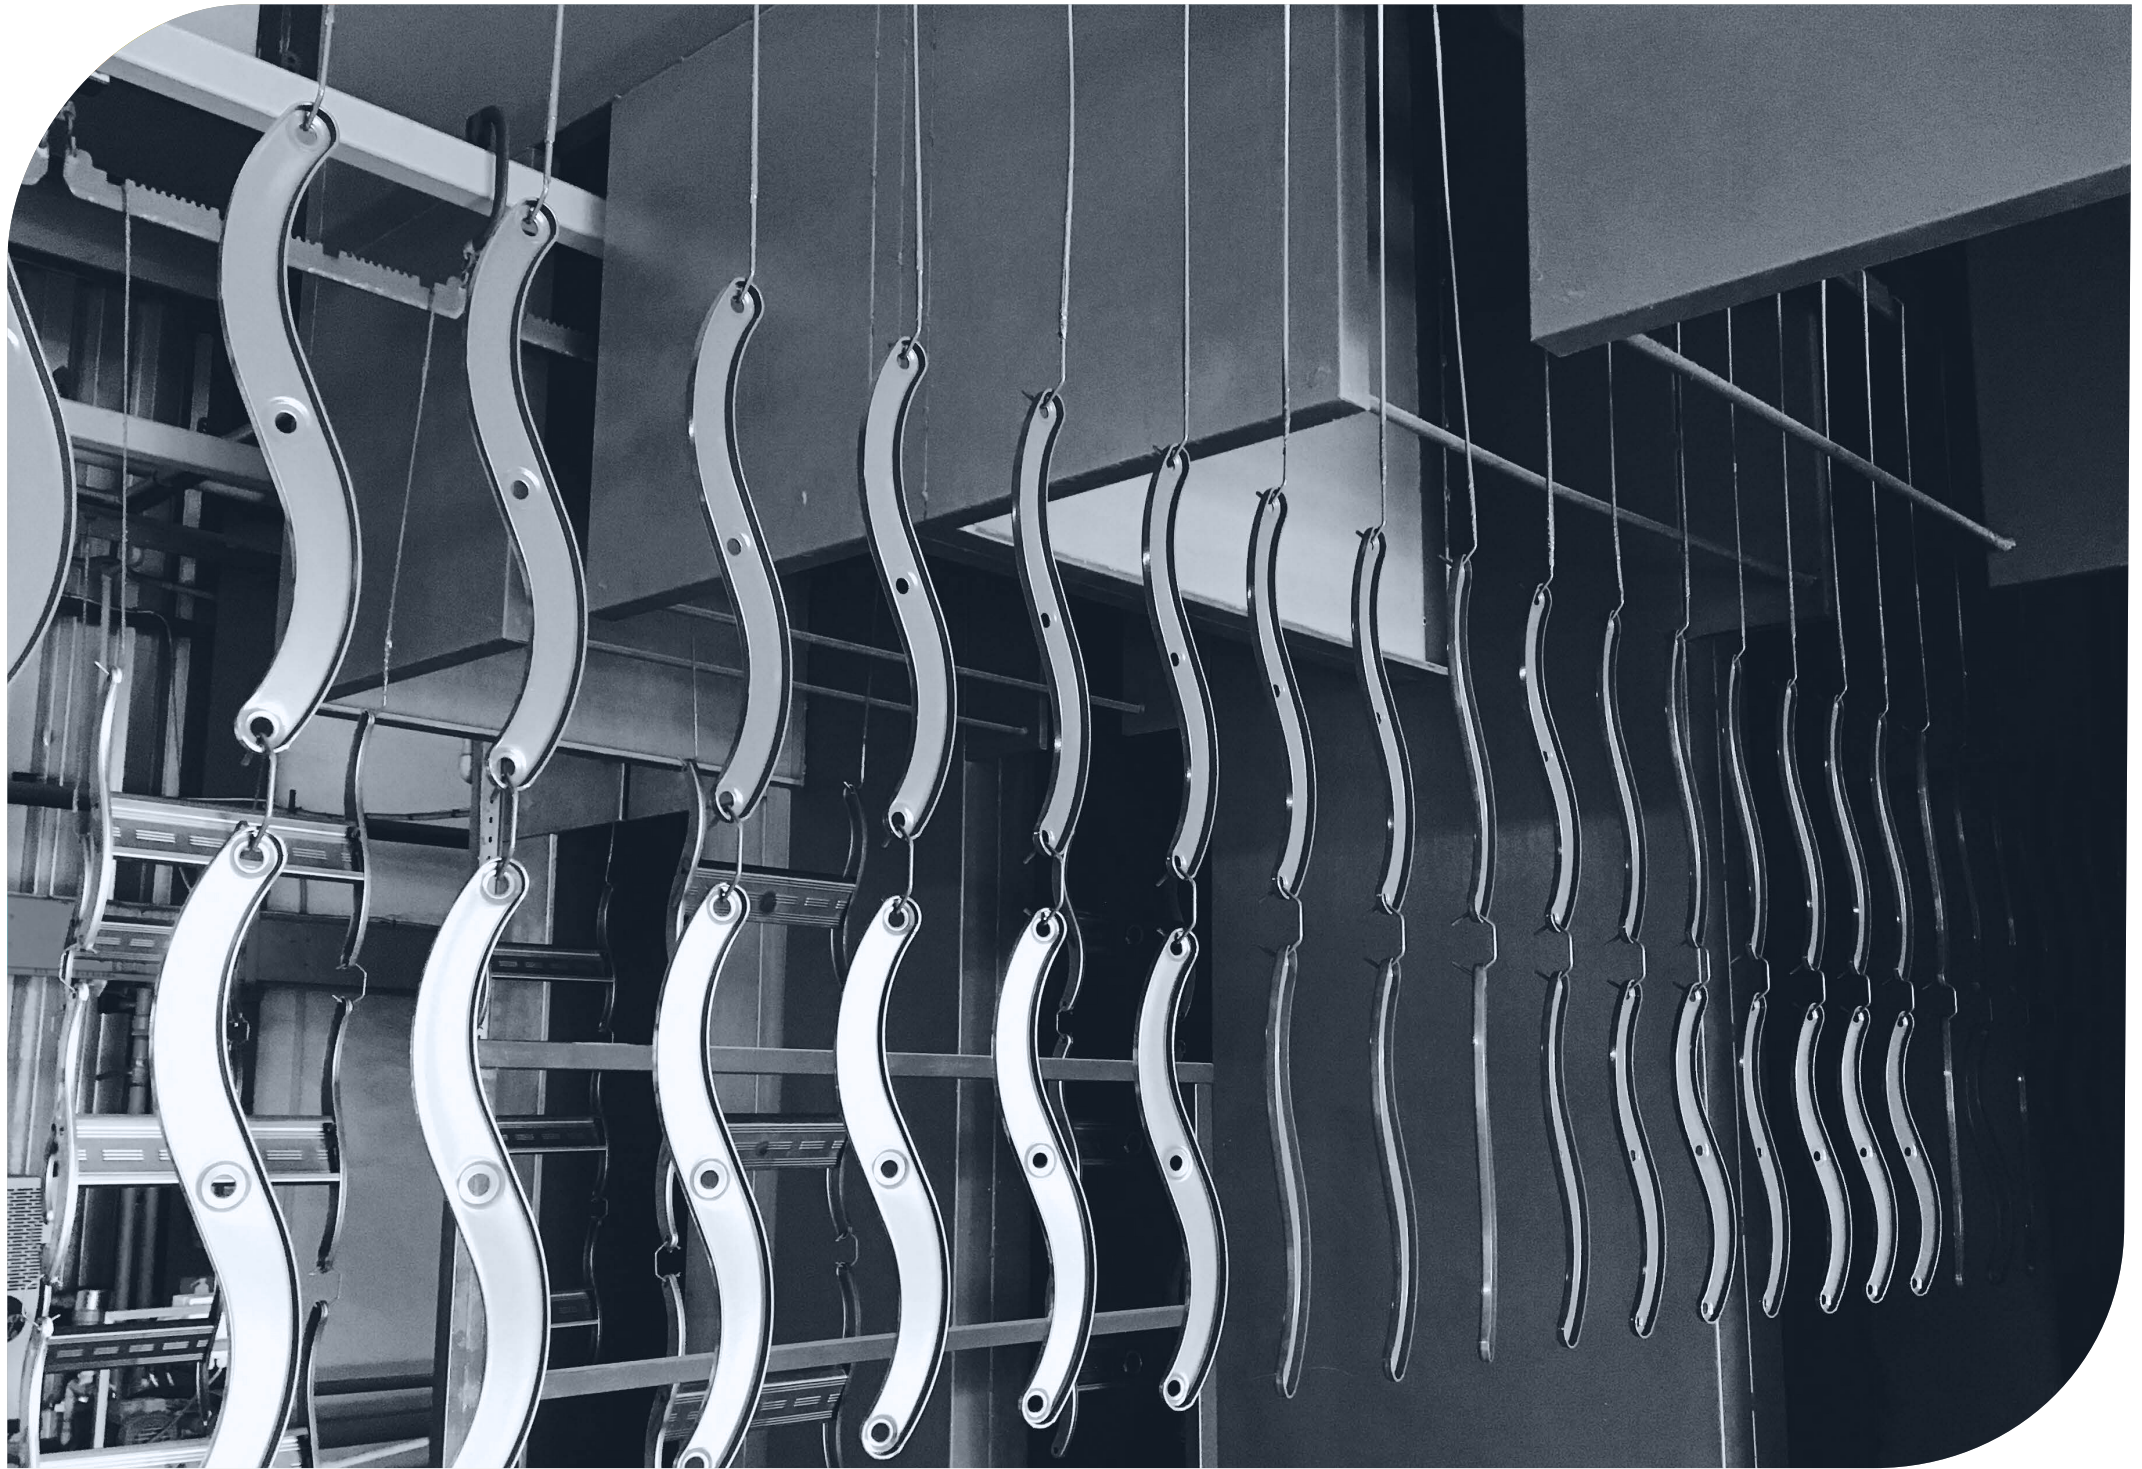

Precision Processes

Bespoke process to meet our client's demands, including operations such as drilling, tapping, inserting, machining and welding.

Steelplan Products offers all supporting operations to produce a finished product, our experienced staff and varied levels of equipment allow us to efficiently complete products to the very highest of standards from drilling and tapping, CNC Machining through to high quality TIG welding and cleaning.

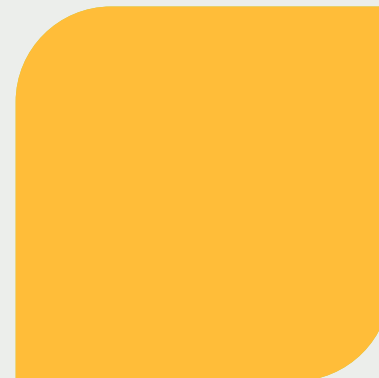

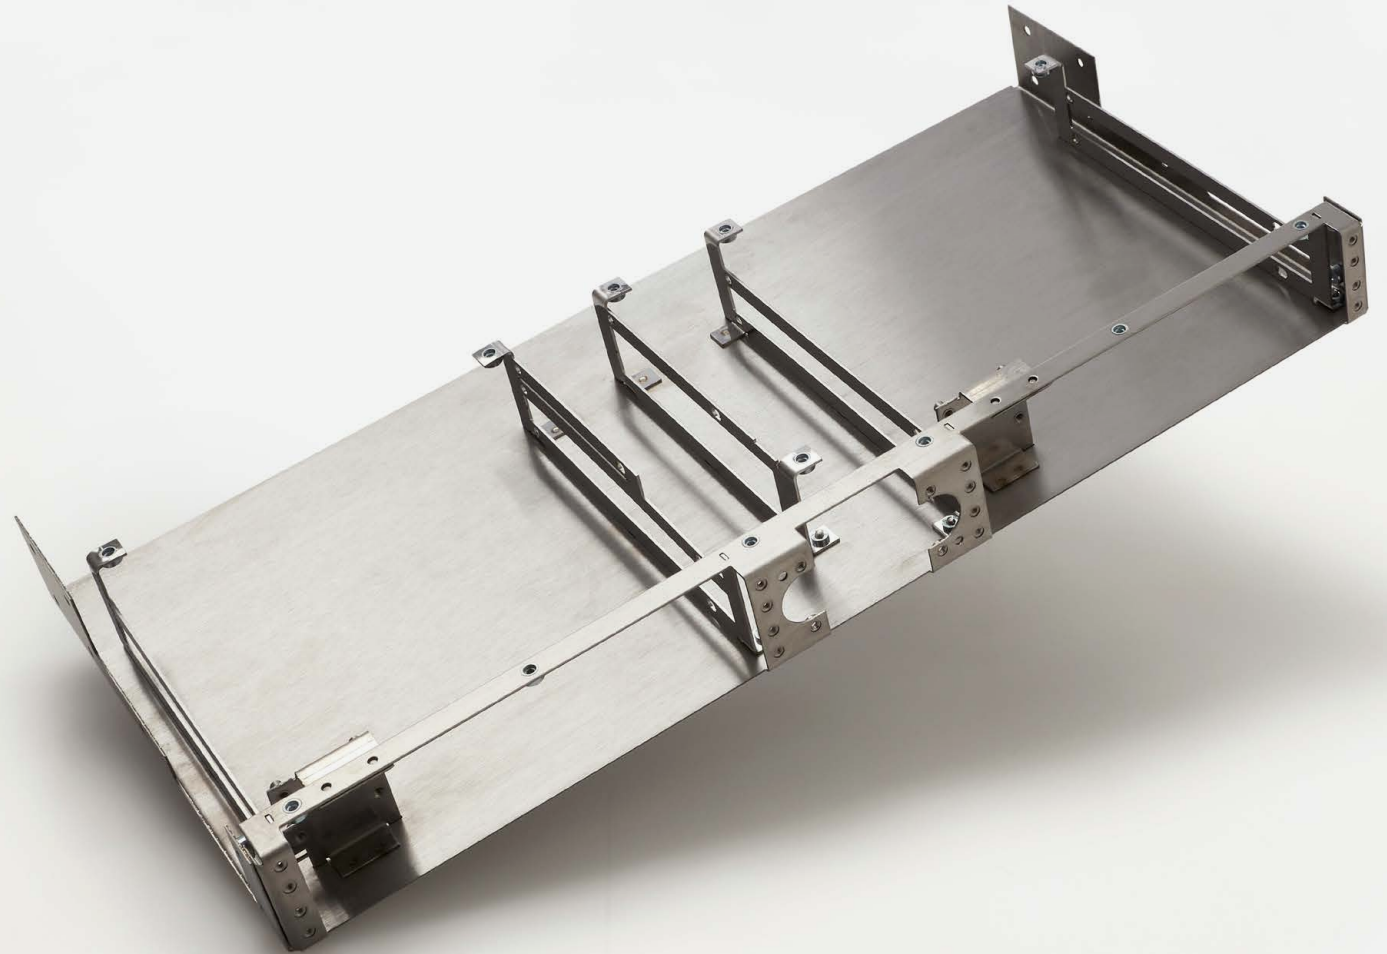

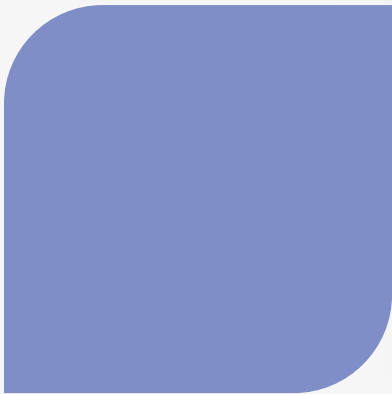

Finishing & Assembly

All products are fully finished via our in-house painting and silk screening plants. We also offer product assembly.

Steelplan Products prides itself on producing the very highest level of Powder Coated finishes via our semi-automated track fed system in all batch sizes, a wide range of stock colours / gloss levels are available plus our partnership with key powder suppliers ensures that we can offer our customers what they need.
